

What is claimed is:

1. A discharging container with a filter comprising:

a bottle which is formed in a manner wherein an inner layer peelable from an outer layer is formed on an inner surface of the outer layer;

5 a plug body placed on a mouth portion of the bottle; and

a filter provided in a discharging pass which is provided in the plug body for discharging liquid kept in a body of the inner layer provided;

10 wherein said inner layer has a memory which expands the inner layer in a manner wherein a difference between an inner negative pressure and an ambient air is higher than a filtration resistance of the filter; and

wherein the negative pressure is caused by the memory of the inner layer and by that liquid remained in a second side of the filter is sucked into a primary side of the filter.

15 2. A discharging container with a filter as set forth in claim 1, wherein said filter has hydrophilicity.

3. A discharging container with a filter as set forth in claim 1, wherein said bottle does not have an outer layer.
